

Miraculous Ladybug “special episode on Plastic”

& free educational resources for primary teachers.

A Netflix special episode on Plastic + educational workshops

The Breteau Foundation (BF) has partnered with Miraculous Ladybug, a world leading Netflix children’s animated tv-series to produce a special one off environmental episode on Plastic for children aged between 7-11 years. BF is also creating a Portfolio of Education Workshops (complete with resources and lesson plans) available for free.

For Primary Teachers

The environmental plastic episode and educational workshops are designed for primary teachers and educators from across the world to use in their school or educational setting. Each workshop comes with a full lesson plan, resources, literacy and numeracy ideas and is aligned to the curriculum.

To empower children to become Plastic Changemakers

Children already know about this issue and demand change. Not only is awareness important but inspiring children with practical solutions and showing them ways to tackle the problem to bring positive change is crucial. Our environmental episode and workshops raise awareness but more importantly equip children with the information and skills to become Plastic changemakers.

Coming in 2023

The educational film and workshops will be available for free on the Breteau Foundation website in 2023 starting with 6 languages (English, Spanish, Portuguese, French, Italian, Norwegian). Pre-register here to be the first to receive exclusive updates!

Special TV episode on Plastic to watch +
